

# READY

## TO TAKE IDLE OFF YOUR TRUCK WITH AN ALL-IN-ONE

**EnPak® A30**  
Miller

With industry-leading technologies, the EnPak® A30 takes idle off your Class 3 to 5 trucks, reducing operating expenses and giving operators the power they need to get jobs done. It delivers 210 amps of integrated multiprocess welding output, 30 cfm of compressed air, battery charge/crank assist and 6,500 watts of generator power.

### POWERFUL CAPABILITIES

#### Compressed air

The EnPak A30 delivers 30 cfm of air, powered by a rotary screw compressor.

#### Battery charge/crank assist

The EnPak A30 provides up to 100 amps of DC power for 12/24V battery charging and up to 300 amps for crank assist.

#### Electric power

With its 6,500-watt generator, the EnPak A30 powers 120/240V AC needs.

#### Welding

The EnPak A30 can easily handle metal repairs with its 210-amp inverter-based welder that's capable of MIG, stick and DC TIG welding.

### ENPAK® ADVANTAGES

#### Maximize payload

Because the EnPak A30 includes the capabilities from multiple machines in one compact design, it reduces a work truck's weight and maximizes its available payload – so work crews can bring everything they need to the jobsite.

#### Fuel flexibility

Available in gas or diesel models, the EnPak A30 gives fleet managers the option to standardize fuel type or integrate into the chassis fuel tank – eliminating the need to fill two tanks.

## TECHNOLOGY THAT INCREASES EFFICIENCY

## IMPROVES WORK ENVIRONMENTS

### Chassis Power

Monitors the truck battery and automatically charges it with up to 100 amps of power, so operators can run inverters and 12-volt tools. No need to stop working to start the truck and charge its battery or worry about draining the battery and being stranded.

### Auto-Speed™ technology

Automatically adjusts engine speed to match compressed air, battery charge and weld demands — reducing fuel consumption, maintenance costs and noise for a safer, more efficient jobsite.

### Auto Start/Stop

Automatically turns the EnPak engine on and off based on demand, reducing fuel consumption and noise.

### CAN bus connectivity

Ability to connect to a telematics system to monitor engine data, machine loads and usage; track service intervals; schedule maintenance proactively and improve diagnostics of your EnPak A30.

### Remote panels

Remote panels and outputs can be installed at the point of use on the truck, so there's less need to climb onto it — reducing the risk of slip, trip or fall injuries. The EnPak A30 includes one main control panel with simple, straightforward controls and a weld/battery output panel. An optional auxiliary power panel is available.

### Reduce noise

The EnPak A30 delivers 20 cfm of compressed air, 125 amps of welding power and 100 amps of Chassis Power at idle speed (2,400 rpm). By keeping the engine at a lower speed with Auto-Speed technology, you save fuel and reduce noise.
