

You need point-of-use control for your engine drive. Which solution is best: **ArcReach® technology** or **Wireless Interface Control**?

ArcReach® technology is your solution!

Each Wireless Interface Control remote is factory-paired with one engine-driven power source. If keeping the pair together doesn't make logistical sense for your company, ArcReach accessories are a better fit for point-of-use weld control.

ArcReach accessories are compatible with many Miller® power sources, including Big Blue®, Trailblazer®, XMT® and Dimension™ machines.

Wireless Interface Control is your solution!

Get full control of the machine in the palm of your hand. Easily change welding processes, adjust parameters, select preset programs, turn the machine and compressor on/off as well as much more from wherever you are on the jobsite.

It saves up to four programs, making it easy to remotely change processes or settings. In addition to process and voltage/current settings, Wireless Interface Control saves features such as arc control, hot start and inductance for applicable processes.

Easily view essential machine information from your Wireless Interface Control remote, including:

- Fuel levels
- Service reminders
- Engine hours
- Error codes

Now you know the best solution for your welding operations!

Technologies at a Glance

ArcReach[®] TECHNOLOGY

Weld process and parameter control at the wire feeder or pendant without a control cord.

System Requirements

- ArcReach[®] power source
- One or more of the following ArcReach accessories:
 - ArcReach[®] SuitCase[®] feeder
 - ArcReach[®] Smart Feeder*
 - ArcReach[®] Stick/TIG Remote

*For advanced welding processes

Key Features

- Point-of-use voltage and amperage control
- Auto-Process Select™
- Front panel lockout
- No control cord necessary

WIRELESS INTERFACE CONTROL

Full front-panel control using the Wireless Interface Control remote.

System Requirements

- Wireless Interface Control-equipped power source**
- Wireless Interface Control remote — included with machine

**All Wireless Interface Control power sources come standard with ArcReach technology

Key Features

- Remote process and parameter control
- Customizable programs
- Engine and compressor on/off
- Machine diagnostics
